

Introducing the MONO procedure

One-step drilling for great outcomes

Minimally invasive for maximal clinical efficiency

The groundbreaking MONO procedure* builds on the principles of the MIPS procedure and makes another leap forward in innovation by reducing drilling to one single step.

- Complete osteotomy for bone anchored implants with one drilling step
- Can be performed under local anaesthetic
- The small incision eliminates suturing
- Increases clinical efficiency

Find out more by visiting oticonmedical.com/mono

*Indicated for adult patients (18 years and above) with normal anatomy. For complete indication, refer to the Surgical Manual Addendum including the MONO Procedure.
